DETAILED ACTION

Claim Rejections - 35 USC § 103

1. Claims 8, 10-12 and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent 5,202,116 to Brown et al.

The cited claims are drawn to the use of a gp130 receptor ligand in the preservation of a kidney for transplantation.

Brown et al. teach that Oncostatin M, a gp130 receptor ligand, is effective to reduce organ transplant rejection. Kidneys are organs so disclosed. Oncostatin M may be used alone or in combination with growth factors. The amount of Oncostatin M is taught to be 50 ng/ml and 1 ng/ml of TGF- β . It would have been obvious to one of ordinary skill in the art to perfuse a kidney for transplantation with an anti-rejection solution. The motivation to perfuse lies in the knowledge that perfusion prior to transplantation would be expected to deliver the solution into the kidney tissues more completely than merely injecting the solution into the recipient. Perfusion guarantees that the area of the transplant has the anti-rejection solution is present in sufficient quantity at the site of the rejection reaction while injecting the solution after transplantation would rely on the circulatory system to deliver the anti-rejection solution to areas that will be expected to have reduced perfusion due to the transplantation surgery that would involve cutting and suturing blood vessels.

Allowable Subject Matter

2. Claims 9, 13-17, 19 and 20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
